

# ASR Replication Preliminary - Felony

*Ryan Larson - UMN*

*10/12/2019*

This analysis represents a preliminary attempt to replicate and extend the Harris et. al. ASR paper. The Minnesota data is situated at the case level from 2010-2015. The full data series extends back to 2004, but VIBES data in the two most populous MN counties, Hennepin and Ramsey, are missing and inconsistent until 2010. Additionally, while data at the conviction level would be more comparable, we do not have data at the conviction level for much of the VIBES data. This analysis uses the felony only data which more closely reflects the ASR paper's use of Washington Superior Court data. We also include an extension set of mixed models to Native American populations, with hypothesized interactions with alcohol-related and hunting and fisheries violations to examine if the courtsey stigma and stereotype congruence effects found in the Black and Latino models extend to Native American populations.

## Distribution of Fines and Fees

## Descriptive Statistics

Table 1: Descriptive Statistics - Felony Data

Statistic	N	Mean	St. Dev.	Min	Pctl(25)	Pctl(75)	Max
Total Fine/Fee	130,037	345.168	3,045.606	0.000	82.680	399.620	369,598.100

### Table 3 Replication

The table below presents a replication of Table 3 in Harris et. al. 2011 with data using only felony offenses. A few differences are of note: “SRA score” and “offender score”, or comparable measures, are not readily available in the MCAO data. We decided to preliminarily use the number of prior offenses as a proxy for “offender score”. Additionally, we use a more expansive offense type categorization for our Native American extensions, including alcohol-related in addition to violent and drug indicators. We run each of the models on a subset of cases consisting of all felony cases, as to make a closer comparison to the superior court data in Washington.
